Hospitality Data Analysis Project

Analyzing hotel performance across cities to optimize revenue, occupancy, and pricing strategy

Made with GAMMA

Project Objective

Revenue Generation

Maximize total revenue through strategic pricing and demand optimization

Occupancy Rates

Increase room utilization and reduce idle capacity

Pricing Strategy

Optimize Average Daily Rate (ADR) based on demand patterns

Customer Experience

Improve satisfaction and reduce cancellations

Made with GAMMA

Key Performance Indicators

₹55....

Total Revenue

Combined hotel performance across analyzed cities

53.4%

Occupancy Rate

Rooms filled vs available capacity

₹11....

Average Daily Rate

Price per occupied room night

₹6.2...

RevPAR

Revenue per available room

Made with GAMMA

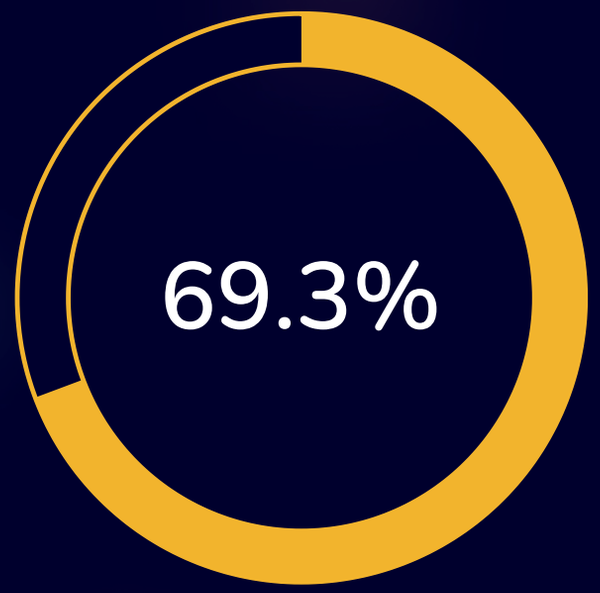
Revenue & Pricing Insights

Key Finding

High ADR (~₱11.7K) with moderate occupancy (53.4%) suggests pricing may be too high for current demand levels.

Implication

Potential revenue loss from pricing inefficiencies. Need to balance rate optimization with occupancy maximization.



Realization Rate

Only ~70% of potential revenue realized

Made with GAMMA

Occupancy & Booking Trends

Weekend: 57.57%

Strong leisure demand on weekends

Weekday: 51.73%

Weaker business demand during weekdays

Platform Variance

Realization varies 65-70% across booking platforms

Demand is seasonal and time-based, with significant revenue leakage from commission impact and discounting issues.

Made with GAMMA

Customer Behavior Challenges

High Cancellation Rate

~25% cancellation rate is very high and indicates poor booking experience, pricing mismatch, or customer dissatisfaction

Low Customer Rating

Average rating of 3.6 stars suggests room for improvement in service quality and guest experience

Revenue Leakage

Only ~70% of potential revenue realized, indicating significant optimization opportunities

Made with GAMMA

Key Problems Identified

1. **Low Occupancy Despite High Pricing**

   ADR of ₱11.7K not translating to room utilization

2. **High Cancellations (~25%)**

   Significant revenue impact from booking reversals

3. **Revenue Leakage**

   Low realization percentage (~69%) across platforms

4. **Weak Weekday Demand**

   Underutilized capacity during business days

Made with GAMMA

Power BI Dashboard Implementation

Dashboard Features

- Interactive KPI tracking for revenue, occupancy, ADR, RevPAR
- Realization rate monitoring across booking platforms
- Weekly trend analysis with weekend/weekday comparisons
- Cancellation rate tracking and pattern identification

Impact Delivered

Enabled data-driven decision making for pricing strategy, demand planning, and booking optimization initiatives.

Made with GAMMA

Business Recommendations

Dynamic Pricing Strategy

Implement time-based pricing to match demand fluctuations and optimize revenue

Weekday Packages

Offer special discounts and packages to boost business day occupancy

Cancellation Reduction

Improve booking policies and offer advance booking incentives to reduce cancellations

Platform Optimization

Negotiate commission rates and optimize booking platform performance

Experience Enhancement

Address customer pain points to improve ratings from current 3.6 stars
